Team Members: Jamal Bailey, Jake Beube, Denyse Huevo, David Wilson

“Get me out of here!” – an Overview

- Description

- This app asks you enter an origin and destination of where you would like to travel and displays several travel mode options (fly, train, bus, drive) and estimates price, distance and duration. We've also incorporated a map and weather information.

- Motivation

- The marketplace of apps available for travel always require you to know your mode of transportation before you start a search. Perhaps consumers would make different choices if they knew they were available.

- Results

- Cost-conscious consumers are provided various ways to reach their destination (example – MegaBus) that are featured in the routes presented. The typical search gives you 6 or more ways to get from point 'A' to point 'B'. This app quite simply provides you those options so you can make a better informed search based on price and other factors.
- In a word, our team would say the results are AWESOME! (per the design specs provided)

The Demo...

The Team & Roles

- Awesome team members:
 - Jamal Bailey – Weather API
 - Jake Beaube – Bootstrapmade.com (the “sizzle”)
 - Denyse Huezo – Google Map API
 - David Wilson – Rome2Rio API
- Challenges
- Improvements
 - Version 1 was developed “agile-like” for prototype evaluation
 - Other features which would improve Version 2 include integration of “trip advisor-like” functionality and an extended weather forecast.

The End

Or is it the beginning???
